Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on February 10, 2005 has been entered.

Claims Allowed

Claims 1-26 are allowable over the prior art of record. The claims are allowable because the prior art does not anticipate nor render obvious the claimed combination of: a vehicle apparatus comprising: a travel direction command determining section configured to determine whether a forward travel command or a reverse travel command has been issued; an electric motor counterelectromotive force detecting section configured to detect a counterelectromotive force of an electric motor that drives a wheel of a vehicle; and a wheel rotational direction determining section configured to determine whether the wheel is rotating in an opposite direction to a vehicle travel direction command determined by the travel direction command determining section, based on a determination that a polarity of the counterelectromotive force detected by the electric motor counterelectromotive force detecting section does not match the vehicle travel direction command determined by the travel direction command determining section; or: A vehicle apparatus comprising: travel direction command determining means for determining whether a forward travel command or a reverse travel command has been issued; electric motor counterelectromotive force detecting means for detecting a counterelectromotive

force of an electric motor that drives a wheel of the vehicle; and a wheel rotational direction determining means for determining whether the wheel is rotating in an opposite direction to a vehicle travel direction command determined by the travel direction command determining means, based on a determination that a polarity of the counterelectromotive force detected by the electric motor counterelectromotive force detecting means does not match the vehicle travel direction command determined by the travel direction command determining means; or: a method for a vehicle comprising: determining whether a vehicle travel direction command has been issued is a forward travel command or a reverse travel command; detecting a counterelectromotive force of an electric motor that drives a wheel of the vehicle; and determining whether the wheel is rotating in an opposite direction to the vehicle travel direction command that has been determined, based on a determination that a polarity of the counterelectromotive force that has been detected does not match the vehicle travel direction command that has been determined.

No particular single feature of the claim renders the claim as a whole patentable. Only the claim taken as a whole combination is deemed new and unobvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art Discussed

The examiner has considered the references cited by applicant in his Information Disclosure Statement filed February 10, 2005. None of the references show all of the features of the claimed invention.

The examiner did not cite any further references.
